# CONTENTS

Volume 66

## GENERAL PHYSICS

Reversible chemical reactions in the unified field theory of thermodynamics. <i>S. Lengyel</i> ..	3
On the extension of the Governing Principle of Dissipative Processes to nonlinear constitutive equations. <i>B. Nyiri</i> .....	19
The transport equations for simultaneous diffusion, heat conduction and electric conduction in aqueous binary electrolyte system. <i>S. Liukkonen</i> .....	29
Statistical foundation of nonequilibrium contact quantities bridging phenomenological and statistical nonequilibrium-thermodynamics. <i>W. Muschik</i> and <i>J. Fang</i> .....	39
On the relation between the Gyarmati, Prigogine and Hamilton principles. <i>H. C. Hou</i> ...	59
Viscoelastic materials with internal variables and dissipation functions. <i>G. A. Maugin</i> and <i>A. Morro</i> .....	69
Some views on extended irreversible thermodynamics. <i>L. S. Garcia Colin</i> .....	79
Correlation and small variation in thermodynamic system. <i>M. Dutta</i> and <i>J. Sen Gupta</i> ...	89
An application of Gyarmati's wave approach. <i>J. Verhás</i> .....	95
Nonequilibrium equations of state and thermal waves. <i>J. Casas-Vazquez</i> and <i>D. Jou</i> .....	99
Thermodynamic analysis of viscous dissipation effects in natural convection flow. <i>S. Antony Raj</i> .....	117
Ars Dynamicae. <i>M. Frias</i> .....	127
Thermodynamics of physical adsorption processes of gases on solid adsorbents. <i>Jürgen U. Keller</i> .....	135
Towards the formulation of a nonlinear fractional extended irreversible thermodynamics. <i>T. F. Nonnenmacher</i> and <i>D. J. F. Nonnenmacher</i> .....	145
Elastic interaction energies between dislocations and/or disclinations in an isotropic body. <i>Sitiro Minagawa</i> and <i>Hiroshi Ogata</i> .....	155
Non-equilibrium thermodynamic description of transport processes of interstitial defects in non-stoichiometric crystals under isothermal conditions. <i>A. S. Cukrowski</i> .....	159
Governing Principle of Dissipative Processes applied to non-stationary diffusion. <i>L. Z. Lakshmanov</i> and <i>S. Lengyel</i> .....	167
Non-linear effects in extended thermodynamics of structural relaxation in liquids. <i>R. E. Nettleton</i> .....	177
Consequences of thermodynamical conditions of stability for thermoviscous fluids and thermoviscoelastic solids. <i>F. Maršik</i> .....	195
Two dimensional explodators. 2. Global analysis of the Lotka-Volterra- Brusselator (LVB) model. <i>H. Farkas</i> , <i>Z. Noszticzius</i> , <i>C. R. Savage</i> and <i>Z. A. Schelly</i> .....	203
The accessibility of arbitrary boundary conditions in membrane transport. <i>G. Dickel</i> ....	221
Heat and temperature effects on the light scattered from a viscoelastic liquid. <i>R. F. Rodriguez</i> .....	233
From classical irreversible thermodynamics to extended thermodynamics. <i>G. Lebon</i> .....	241
On electromagnetic waves in isotropic media with dielectric relaxation. <i>V. Ciancio</i> and <i>G. A. Kluitenberg</i> .....	251

Relation between Curie's principle and Onsager's reciprocity. <i>I. Kirschner and P. Molnár</i> .....	277
Isotherm multicomponent diffusion in Gyarmati's wave approach. <i>F. Márkus</i> .....	289
Application of the Governing Principle of Dissipative Processes to the Taylor problem. <i>Nguyen Huyen Tung</i> .....	295
Basic equations of the modern thermodynamic calculation of interface properties (MTCIP) theory and their relation to the thermodynamic wave theory and Gyarmati's other basic results. <i>L. Z. Mezey and J. Giber</i> .....	309
Nontrivial Pfaffian forms in cosmology. <i>B. Lukács and G. Pád</i> .....	321
Entropy lowering and attractors in phase space. <i>W. Ebeling and H. Engel-Herbert</i> .....	339
Флуктуационно-диссипационные соотношения, вариационные принципы и стоха- стические модели нелинейных неравновесных термодинамических систем. <i>Г. Н. Бочков и Ю. Е. Кузовлев</i> .....	349
